## Fernie Facts

---

- On summer evenings, the setting sun creates a natural shadow on Mount Hosmer that resembles a horse and rider – known locally as the “Ghost rider,” one of Fernie’s most famous natural phenomena.
- Fernie was named after William Fernie, a key figure in developing Elk Valley coal mining alongside Colonel James Baker. The town grew rapidly after the Canadian Pacific Railway arrived in 1897, attracting workers from around the world and becoming a major coal mining hub that later shifted from underground mining (ending in 1986) to large-scale regional operations that continue today.
- Fernie was founded in 1897 during the coal mining boom and quickly became a major mining town, but its history was marked by hardship, including deadly mining disasters and two major fires in 1904 and 1908 that destroyed much of the town. After the 1908 fire, Fernie was rebuilt in brick and stone, creating the historic downtown that still stands today and reflecting the town’s resilience through repeated adversity.
- Fernie’s most famous winter symbol, the “Griz”, is a legendary mountain spirit who is said to bring the region its world-class powder snow. Each March, the town celebrates him during Griz Days, a winter festival filled with costumes, events, and community celebrations.
- Hollywood has filmed movies in Fernie, including Hot Tub Time Machine, Cold Pursuit and Love in Glacier National.
